  species-specific differences 305(L)
cannabinoid receptor: psychiatric disease 38
carbon catabolite repression 2
carcinogenesis *see* cancer
carp, pseudogenes 418(L)
CD4: T cell antigen recognition 264(M)
CDC genes, *S. cerevisiae* 329
cdc25A protein, human 422(M)
Cdc28 kinase, yeast 391(M)
cdk2-cyclin E kinase, cdc25A phosphorylation 422(M)
CDK41 gene 228(M)
cDNA selection 352
ced-3 gene, *C. elegans* 350(M)
cell cycle
  CDK41 gene 228(M)
  developmental modification, *Drosophila* 321
  G1 phase regulation 150(M)
  protein phosphatase V, *Drosophila* 6(M)
  Ras signalling 46
  S. cerevisiae 78(M), 228(M)
  STPK13 gene, mouse 77(M)
cell death *see also* apoptosis
  bcl-2 gene role 6(M)
  ced-3 gene, *C. elegans* 350(M)
cell markers: green fluorescent protein 151(M)
cell migration
  Drosophila development 59

HOM-C genes, *C. elegans* 159
cell polarity
Drosophila epithelia 275
S. cerevisiae 328, 394
cell surface antigen determination 41(TT)
central nervous system
Drosophila programmed cell death 78(M)
Nedd-2 gene role 350(M)
centromere: DNA sequence localization 77(M)
centromere proteins: kinetochore size maintenance 228(M)
cephalization, evolutionary conservation 314
Ceratopteris richardii, sex determining genes 309(M)
Charcot–Marie–Tooth disease 128, 434
chemotaxis, bacterial 136
chiasma formation 112(L), 113(L), 114(L)
cholesteryl ester transfer protein: in atherosclerosis 201
cholinesterase deficiency due to Alu insertion 191
chromosome 413(BR)
evolution 34(BR)
microdissection and cloning 179(BR)
pairing 308(M)
circadian cycle
clock gene, mouse 229(M)
Drosophila 69
Cladosporium fulvum, host resistance 117(M)
CLN genes, *S. cerevisiae* 228(M)
clock gene, mouse 229(M)
Cochliobolus carbonum 13
colon cancer 164
conjugation, bacterial 178(BR)
COP1 gene, *A. thaliana* 263(M)
Coprinus cinereus: *A* mating-type factor 1
corticotrophs 222
cosmid DNA: electroporation into bacterial cells 5(TT)
creA gene, *A. nidulans* 2
Crigler–Najjar type 1, gene therapy 254
cross-over, meiotic 112(L), 113(L), 114(L)
crumbs gene, *Drosophila* 278
cryoconservation of *Dunaliella* 3(TT)
cyprinid fish, pseudogenes 418(L)
cytochrome oxidase (*cox1*) gene, yeast 6(M)
cytogenetics 413(BR)
cytomegalovirus: host resistance 365
cytoskeleton development, *Drosophila* 235, 309(M)
cytotoxic T cells: viral resistance 143, 422(M)

D

Darier's disease 38
deafness 428
decapentaplegic (*dpp*) gene, *Drosophila* 20, 23, 372, 384
Delta (*Dl*) gene, *Drosophila* 89
differential methylation
imprinting 6(M), 78(M), 118, 196, 389(L)
vertebrate somatic cells 398
digoxigenin-labelled probes: *in situ* hybridization 73(TT), 75(TT)
direct selection 352
dishevelled (*dsh*) gene, *Drosophila* 220
diversity: archaebacteria 186
DNA
bending 97, 408
isolation using polyester plug spin inserts 344(TT)
localization of sequences for centromere function 77(M)
strand segregation model 392
transcription 417(L)
DNA fingerprints 106(BR)
paternity testing 204
DNA methylation
imprinting 6(M), 78(M), 118, 196, 349(L), 389(L), 415
X-chromosome inactivation 233
DNA replication
yeast 227(M), 78(M)
dosage compensation 230, 415
Drosophila 117(M), 376
doublesex (*dsx*) gene, *Drosophila* 104, 186(M)
Down's syndrome 37
Drosophila 299(BR)
alcohol dehydrogenase (*Adh*) gene 109
axis formation 89
bicoid gene 383
cell cycle developmental modification 321
cell migration regulation 59
cell signalling pathways 219
cytoskeletal development 235, 309(M)
decapentaplegic (*dpp*) gene 20, 23, 26, 372
dosage compensation 117(M), 376
egg chamber development 235
engrailed gene 310, 384, 399, 421(M)
epithelial cell polarity control 275
eye development 44
flamenco gene 421(M)
gap gene expression 264(M), 303
gypsy retrotransposon 421(M)
hedgehog protein 187
homeotic genes 22, 310, 351(M), 358
homology in development 261
in situ hybridization of whole mount embryos 266(TT)
jump response 303(L)
limb development 187, 396
morphogens 383
myogenesis 396
oogenesis 89
P element 7, 60, 77(M), 101
period (*per*) gene 69
programmed cell death 78(M), 227(M)
protein phosphatase V 6(M)
rho GTPases subfamily 436
sex determination 186
shaggy/zeste white 3 gene 220, 383
teashirt gene 351(M)
telomere 77(M)
transposable elements 7, 77(M)
trunk segmentation 351(M)
wingless gene 23, 219, 310, 383
Dunaliella, cryoconservation 3(TT)

E

ear morphogenesis, mammals 428
ecdysone: programmed cell death, *Drosophila* 78(M)
ectromelia virus: host resistance 367
electrophoresis 107(BR)
pulsed field gel 115(TT)
electroporation, cosmid DNA into bacterial cells 5(TT)
elongation factor
EF-Tu, ribosomal signalling 27
P. anserina 71(L)
embryogenesis 339(BR)
A. thaliana 43(M), 84
axis formation, *Drosophila* 89
cell cycle variation, *Drosophila* 321
cell migration regulation, *Drosophila* 59
development of viscera, *Drosophila* 22

inner ear development, mammals 428
left-right axis formation, vertebrate 392
LIM protein 315
limb development, *Drosophila* 187
mammalian 181
mouse 216(BR), 308(M), 350(M)
muscle development 301, 396
Nedd-2 gene 350(M)
oocyte development *Drosophila* 235
patterning in *C. elegans* 49, 123, 264(M)
T gene, mouse 280
trunk segmentation, *Drosophila* 351(M)
Vg1 protein role 371
Wnt-3a gene, mouse 151(M), 301
zebrafish model 152
endonuclease: recombination 306(L)
engrailed (*en*) gene, *Drosophila* 310, 384, 399, 421(M)
Enterococcus hirae: copper-homeostasis genes 249
epidermal growth factor
lin genes, *C. elegans* 145
receptor, *Drosophila* oogenesis 89
epistasis 219
epithelia: cell polarity, *Drosophila* 275
Escherichia coli
antisense open reading frames 350(M)
chemotaxis 136
mismatch repair 165
pyelonephritis-associated pili phase variation 150(M)
RNA polymerase 292
translation initiation 402
ethylene response pathway, *A. thaliana* 137
eukaryote
signal transduction 133, 381(BR)
transcription by RNA polymerases 292
evolution 297(BR)
agouti gene 423
annexin supergene family 241
axial patterning gene conservation 310
chromosome 34(BR)
developmental 261
protein introns 147
transposable elements 7
exo gene, *Rhizobium* 63
exopolysaccharides, *Rhizobium* 63
eye development, *Drosophila* 44, 391(M)

F

familial hypercholesterolemia: mouse model 202
familial hypertrophic cardiomyopathy 302
Far1 gene, *S. cerevisiae* 391(M)
fibroblast growth factor (FGF) receptor, mesoderm induction 150(M), 371
filamentous fungi 1
vegetative incompatibility 441
flamenco gene, *Drosophila* 421(M)
fluorescein-labelled probes: *in situ* hybridization 73(TT), 75(TT)
fluorescent *in situ* hybridization homologous chromosomes 308(M)
plant chromosome labelling 265(TT)
FMR-1 gene, role in psychiatric dieases 37
follicle cell signalling, *Drosophila* oogenesis 90
footprinting: nucleic acid-protein complexes 413(BR)
forebrain: evolutionary conservation 310
fragile X syndrome 37, 120
fungi
DNA isolation technique 226(TT)
filamentous 1, 441
plant interactions 2
reproduction 180(BR)
vegetative incompatibility 441
fusion protein
induction and preparation from recombinant phages 183(TT)
fyn gene, mouse 77(M)

G

G1 phase
Cdc28 kinase, yeast 391(M)
cdc25A 422(M)
cell cycle *Drosophila* 326
regulation 150(M)
GAL4 protein, telomeric silencing 309(M)
gap genes, *Drosophila* 264(M), 303(L)
GATA factors 1
Gaucher disease, gene therapy 255
gene duplication 418(L)
gene expression
developmental evolution 261
E. coli 150(M)
gap gene, *Drosophila* 264(M)
green fluorescent protein marker 151(M)
gene-for-gene interaction
host-parasite genes 13
host-pathogen 117(M), 421(M)
gene therapy 111, 259(BR)
cancer 174
HIV 139
metabolic disorders 253
myogenic cell use 301
neurological disorders 210
gene transcription 33(BR)
genetic mosaicism 230
genome evolution by Alu repeat variation 188
genome imprinting 6(M), 78(M), 118, 346(L), 347(L), 348(L), 415
terminology and definitions 196, 389(L)
X chromosome inactivation 230, 415
genome mapping 447(BR)
human 108(BR)
hybridization techniques 79
livestock 334
germ cells
differentiation 186(M)
gene conversion 151(M)
tumours 346(L), 347(L)
X chromosome inactivation 230
GLABROUS1 (*GL1*) gene, *Arabidopsis* 117(M)
glnA gene, *Salmonella* 42(M)
glp-1 gene, *C. elegans* 264(M)
Glucanex: preparation of YACs 4(TT)
goldfish: pseudogenes 418(L)
goosecoid gene 181, 312
green fluorescent protein: cell marker 151(M)
Grieg cephalopolysyndactyly syndrome 430
group I intron: mobility 306(L)
group II intron: transposition 6(M)
GTPases: rho subfamily 436
gynogenetic development, zebrafish 153
gypsy retrotransposon, *Drosophila* 421(M)

H
H-*RAS* gene, mouse 305(L)
H19 gene: imprinting 6(M), 78(M), 118, 196, 347(L), 348(L), 415
haemophilia B: Alu insertion in Factor IX 191
head development 310
heavy-metal transporter genes, human 246
hedgehog gene, *Drosophila* 187, 219, 261, 384
Hensen's node 181
hereditary neuropathy with liability to pressure palsies 129
hereditary non-polyposis colorectal carcinoma 164
Herpes simplex virus 267
gene therapy vector 174, 213, 254
het genes, fungi 441
heterochronic genes, *C. elegans* 123
heterokaryosis, filamentous fungi 441
high-density lipoprotein: atherosclerosis prevention 200
high-mobility group (HMG) domain protein 94
histidine kinase 133
histone H4, acetylated: Drosophila dosage compensation 117(M), 376
HIV *see* human immunodeficiency virus
HLA-DM genes: antigen presentation 186
hMSH2 gene, human 164
homeosis 341
homeotic (HOM-C) genes 342
colinearity and functional hierarchy 358
Drosophila viscera 22
embryonic patterning 49, 351
evolution 261, 310
patterning, *C. elegans* 159
homologous chromosome pairing 308(M)
homologous ligation: cloning method 420(TT)
horizontal transfer of transposable elements 7
host resistance
fungal tomato pathogen 117(M)
infection 365
Hox genes 261, 361, 418(L)
deafness 429
evolutionary conservation 310
myogenesis 399
human genetics 32(BR), 215(BR), 446(BR)
cancer 164, 174, 228(M)
CDK41 gene 228(M)
cell polarity 330
Charcot–Marie–Tooth disease 128, 434
copper-transport disease 246
deafness 428
disease 107(BR), 365, 415
DNA sequences for centromere function 77(M)
gene therapy 111, 139, 174, 253
genome evolution by Alu repeat insertion 188
Human Genome Programme 108(BR)
metabolic disorders 253
neurological disorders: gene therapy 210
ovarian trophoblast disease 118
psychiatric diseases 37
RAS genes 305(L)
human immunodeficiency virus (HIV)
gene therapy 139
MHC class I restricted cytotoxic T lymphocyte role 422(M)
Hunter syndrome 434
Huntington's disease 37, 210
Hurler syndrome 434
hybridization *see also in situ* hybridization
allele-specific oligonucleotides 184(TT)
based selection 352
genome mapping techniques 79

I
Igf2 gene
imprinting 6(M), 78(M), 118, 196, 347(L), 348(L), 389(L), 415
imprinting
genomic 6(M), 78(M), 118, 346(L), 347(L), 348(L), 415
terminology and definitions 194, 389(L)
in situ hybridization *see also* hybridization
non-isotopic 75(TT)
plant chromosome labelling 265(TT)
whole mount embryos 266(TT)
zebrafish embryos 73(TT), 75(TT)
incompatibility interaction
host–parasite genes 13
host–pathogen genes 117(M)
inner ear morphogenetics 428
insect baculovirus 390(M)
insertion of Alu repeats 190
insulin-like growth factor type 2 receptor gene *see Igf2*
int2 gene, mammals 429
inteins 306(L)
intracellular immunization: viral resistance 139
intron
aI1, yeast 6(M)
group II, transposition 6(M)
mobile group I 306(L)
protein: evolution 147
intron sliding: Alu insertions 191
inv gene, vertebrates 392
ISL1 gene, rat 315

K
kinetochore: size maintenance 228(M)

L
labial (*lab*) gene, *Drosophila* 22, 384
lactotrophs 222
lacZ expression 117(M), 398
latency-associated transcripts, *Herpes simplex* virus 213, 267
left-right polarity, vertebrates 392
ligation techniques
homologous: cloning method 420(TT)
YACs 345(TT)
LIM proteins 315
limb development
Drosophila 187
myogenesis 301, 396
regeneration: amphibia 169
lin genes, *C. elegans* 123, 145, 160, 315, 390(M)
linkage maps 113(L), 114(L)
livestock 334
lipoproteins: atherosclerosis 199
liposome-mediated gene transfer: cancer therapy 176
listeriosis: host resistance 366
low-density lipoproteins: atherosclerosis 200
lymphoid enhancer-binding factor 94

M
mab-5 gene, *C. elegans* 160
maize
resistance to *C. carbonum* race 1 13
Rough sheath 1 (*Rs1*) gene 151(M)
transposable elements 385
major histocompatibility complex – class II *see also* MHC
HLA-DM genes 186(M)

host resistance genes, mouse 365
T cell antigen recognition 264(M)
malaria: host resistance 366
male-specific lethal (*msl*) genes, *Drosophila* 376
MAP kinase cascade
C. elegans 145
Ras dependent activation 44
mapping
genes 112(L), 113(L), 114(L), 334, 447(BR)
hybridization techniques 79
Marfan syndrome 422
mariner elements, *Drosophila* 7
marker-assisted selection: genome map construction 334
mating-type switching, *S. pombe* 392
matrix-associated region: reduced position effect in plants 187
mec-3 gene, *C. elegans* 315
meiosis 112(L), 113(L), 114(L)
chromosome pairing 308(M)
Menkes disease 246
mer gene, Gram-negative bacteria 248
mesoderm formation
induction by activin 150(M), 391(M)
nodal gene, mouse 308(M)
T/Brachyury gene, mouse 280
Vg1 protein 371
Wnt-3 gene, mouse 151(M), 301
Xenopus 283
messenger RNA
Alu sequences 188
β-actin: localization 390(M)
mammalian pre-mRNA, splice site 100
maternal *glp-1*, *C. elegans* 264(M)
prokaryotic translation initiation 402
stability 298(BR)
metabolic disorders: gene therapy 253
methylation
imprinting 6(M), 78(M), 118, 197, 349(L), 389(L), 415
in *pap* regulatory DNA 150(M)
vertebrate somatic cells 398
X chromosome inactivation 233
MHC class I restricted cytotoxic T lymphocytes 422(M)
microsatellite
markers, genome map construction 336
sequence alteration in cancers 164
microwave treatment: bacterial clones 149(TT)
minisatellite
germline mutation 151(M)
paternity testing 204
mismatch repair: human cancer 164
mitochondrial transcription factor 94
Mlc1-CAT transgene, *S. pombe* 392
MNK gene, human 246
molecular biology 216(BR)
plant 215(BR)
Moloney leukemia virus vector: gene therapy 254
morphogens 383
activin 150(M), 371, 391(M)
motor protein: motility assays 300(BR)
mouse
agouti gene 423
apoptosis induction 350(M)
atherosclerosis model 199
axis formation 392
bcl-2 gene 6(M)
c-Mos gene 351(M)
circadian cycle 229(M)
clock gene 229(M)
embryology 216(BR)
fyn gene 77(M)
H19 gene 6(M), 78(M), 197
host resistance model 365
Igf2 gene 6(M), 78(M), 197
myogenesis 396
nodal gene 308(M)
organizer 181
PCR analysis of rodless retina DNA 43(M)
primitive streak formation 308(M)
sex reversal 187
short-ear mutation 16
spermiogenesis 263(M)
STPK13 gene 77(M)
suckling behaviour 77(M)
Wnt-3a gene 151(M)
mRNA *see* messenger RNA
mpk-1 allele, *C. elegans* 146
Mucor racemosus: translational integrity 71(L)
multilocus probes: paternity testing 204
multiple drug resistance type 1: cancer therapy 176
murine leukemia virus: host resistance 366
muscular dystrophy 302
mutation rate in minisatellite loci 205
Mycobacterium: protein introns 147
myoblast: heterogeneity 396
myogenesis 301, 396
myotonic dystrophy 37

N

Nedd-2 gene 350(M)
neural differentiation
LIM protein role 315
notochord formation 280, 301
neurological disorders: gene therapy 210
Neurospora crassa 1
het loci 442
neurotrophic growth factor: Alzheimer's disease 211
neutralism 109
nitrogen regulatory protein 42(M)
nodal gene, mouse 308(M)
Notch (*N*) gene, *Drosophila* 89
notochord formation 301
T gene, mouse 280
nuclear polyhedrosis virus 390(M)
nucleoprotein complexes: HMG domain protein 94

O

Oct-1 POU protein domain: crystal structure 229(M)
oligonucleotide hybridization: gene mapping 79
oncogenes
K-*RAS* 174
species-specific differences 305(L)
oogenesis
Drosophila 89, 235
parthenogenetic development in mouse 351(M)
open reading frames
antisense, *S. cerevisiae* 350(M)
RNA splicing 422(M)
OPUS protein family 303(L)
origin recognition complex, *S.cerevisiae* 78(M), 409
orthodenticle (*otd*) gene, *Drosophila* 310
osteogenesis imperfecta 434
Otx gene, mouse 312
ovarian trophoblast disease 118, 346(L), 347(L), 348(L)

P

P element, *Drosophila* 7, 60, 77(M)
splicing 101
p53 gene 174
mutations in skin cancer 187(M)
pap pili, *E. coli* 150(M)
parasite-plant interaction 12

parental imprinting 6(M), 78(M), 118, 197, 389(L), 415
Parkinson's disease: gene therapy prospects 211
parthenogenesis: mouse oocytes 351(M)
paternity testing 204
patterning
axial, evolutionary conservation 210
embryonic, *C. elegans* 49, 123, 159
mesoderm induction 159(M), 151(M), 280, 301, 308(M), 391(M)
morphogen 383
mouse 151(M), 280, 301, 308(M)
vertebrate axis 392
Vg1 371
PAX-3 gene
myogenesis 301
Waardenburg syndrome type 1 430
period (*per*) gene, *Drosophila* 69, 110
phage *see* bacteriophage
phase switching, *E. coli* 150(M)
phenotypic suppression: homeotic genes 358
phenylketonuria: gene therapy 253
phosphotyrosine phosphatases: signal transduction pathway 54
pituitary gland: differentiation control 222
plants
chromosome labelling by *in situ* hybridization 265(TT)
crop germplasm conservation 32(BR)
development 215(BR)
transposon tagging 385
parasite interaction 12
pathogen interaction 117(M), 421(M)
tetracycline-responsive gene expression 229(M)
transgenic: reduced position effect 187
plasmids: rescuing from dead bacteria 184(TT)
PMP22 gene, human 434
Podospora anserina
aI1 intron 6(M)
het loci 442
translational integrity 71(L)
pointed gene, *Drosophila* 391(M)
polarity
cell, *S. cerevisiae* 328
embryo, *C. elegans* 264(M)
epithelial cell, *Drosophila* 275
vertebrate left–right axis 392
Polycomb genes, *Drosophila* 264(M), 358
polyester plug spin inserts, DNA isolation 344(TT)
polygenic disorders: atherosclerosis 199
polymerase chain reaction 225(TT)
allele-specific oligonucleotide hybridization standards 184(TT)
amplification of sperm DNA 151(M)
analysis of rodless retina DNA 43(M)
characterization of bacterial clones 149(TT)
direct selection 352
sequencing: preparing samples for loading 185(TT)
use in paternity testing 207
position-effect variation: reduction in transgenic plants 187
Prader-Willi syndrome 416
pre-mRNA, splicing 100
primates, evolution: Alu sequences 188
primitive streak formation, mouse 308(M)
prion protein analogue, *S. cerevisiae* 309(M)
programmed cell death *see* apoptosis
prokaryotes 338(BR)
recombination pathway 307(L)
signal transduction 133, 381(BR)
transcription 292
translation 402
protein evolution: Alu sequences 188
protein histidine kinases 133
protein intron: evolution 147
protein kinase C 228(M)
protein phosphatase V, *Drosophila* 6(M)
protein tyrosine phosphatases 54
protein–protein interaction
RAP1 protein 408
two-hybrid system 286
protooncogene
bcl-2 gene 6(M)
c-Mos gene 351(M)
Wnt1 gene 219
pseudogenes in tetraploid species 418(L)
psychiatric diseases 37
pulsed field gel electrophoresis 115(TT)
pyelonephritis-associated pili phase variation, *E. coli* 150(M)

R

RAD9, yeast 43(M)
RAP1 protein, yeast 408
Ras protein
Drosophila oogenesis 92
gene mutation 305(L)
growth regulation 44
signalling pathway 145, 219
reaper (*rpr*) gene, *Drosophila* 227(M)
recA gene, *Mycobacterium* 147
receptor tyrosine kinase
cell migration regulation 59
sevenless 391(M)
signal transduction 145, 390(M)
recombinant bacterial clones: characterization 149(TT)
recombination 112(L), 113(L), 114(L), 259(BR)
double-stranded break repair 307(L)
sequences from tandemly repeated genes 42(M)
replication origin activation, yeast 227(M)
retinoblastoma gene 305(L)
retinoic acid receptors: amphibian limb 170
retroposition of Alu repeats 188
retroviral vectors: gene therapy 176, 214, 254
reverse splicing, group II introns, yeast 6(M)
reverse transcriptase: inhibitor screening technique 388(TT)
rhabdomyosarcoma: *H19* gene 415
Rhizobium
chemotaxis 137
exopolysaccharides 63
rho GTPase subfamily 436
rhomboid protein, *Drosophila* 92
ribosomal RNA, archaebacteria 186(M)
RNA polymerases 292
RNA splicing: open reading frame maintenance 422(M)
rodless retina mutation, mouse 43(M)
root formation, *A. thaliana* 84
Rough sheath 1 (*Rs1*) gene, maize 151(M)
RPS2 gene, *A. thaliana* 421(M)
rRNA *see* ribosomal RNA
rum1 gene, *S. pombe* 150(M)

S
Saccharomyces cerevisiae 1
antisense open reading frames 350(M)
cell cycle 228(M)
cell polarity 328, 394
histidine kinase 137
homeodomain proteins 421(M)
mating-type switching 421(M)
mismatch repair genes 164
pheromone response, signalling system 44
prion protein analogue 309(M)
RAP1 protein 408
rho GTPase subfamily 436
SIT4 gene 6(M)
tandemly repeated genes 42(M)
telomeric silencing 309(M), 408
transcriptional silencing 78(M), 408
translational integrity 71(L)
SalI-compatible cloning, YACs 345(TT)
Salmonella, *glnA* expression 42(M)
saturation mutagenesis, zebrafish 154
schizophrenia 37
Schizosaccharomyces pombe
cdc2 protein kinase 422(M)
cell polarity 330
G1 phase 150(M)
genome mapping 80
pheromone response 44
strand segregation model 392
selection of tRNA: molecular mechanism 27
selectionism 109
senescence: species-specific differences 305(L)
sequencing
genome, hybridization techniques 79
preparing samples for gel loading 185(TT)
sevenless receptor tyrosine kinase 391(M)
sex determination
Ceratopteris 308(L)
Drosophila 186(M)
mammalian 297(BR)
signalling pathway 219
Sry locus, mouse 187(M)
Sex-lethal (*Sxl*) gene, *Drosophila* 376
sex reversal: mouse 187(M)
SH2 domain: phosphotyrosine phosphatases 54
shaggy/zeste white 3 (*sgg*) gene, *Drosophila* 220, 383
shoot apical meristem , *A. thaliana* 43(M)
signal transduction 145, 381(BR)
bone morphogenetic proteins 16
cell communication pathway 219
fibroblast growth factor (FGF) 150(M)
oogenesis, *Drosophila* 89
phosphotyrosine phosphatases 54
protein kinase 133
Ras proteins 44, 145
receptor tyrosine kinase 59, 390(M)
regulation of β-actin mRNA 390(M)
rho GTPases 436
sevenless receptor tyrosine kinase 391(M)
wingless gene 383
single locus probes: paternity testing 205
single-strand conformation polymorphism 225(TT)
SIT4 gene, *S. cerevisiae* 6(M)
skeletal morphogenesis: bone morphogenetic protein 16
skin cancer: p53 mutation 187
Sly syndrome: gene therapy 255
somatotrophs 222
somite formation 151(M), 301
Sox proteins 95
Spemann's Organizer 181, 316, 371
spermiogenesis: mouse 263(M)
splicing
intronic Alu sequences 188
mammalian pre-mRNA 100, 422(M)
protein intron 147
reverse, yeast group II intron 6 (M)
SR proteins 103
SRY sex determination factor 94, 187(M)
stardust gene, *Drosophila* 278
Stickler syndrome 434
STPK13 gene, mouse 77(M)
strand segregation model 392
succinoglycan, *Rhizobium* 63
suckling behaviour, mouse 77(M)
sur-1 allele, *C. elegans* 146
symbiosis, *Rhizobium*–legume root nodule 65
Syp gene 54

T
T cell, antigen recognition 264(M)
T/Brachyury gene, mouse 280
tailbud formation, mouse 151(M)
teashirt gene, *Drosophila* 351(M)
telomere
integrity, yeast 43(M)
silencing, *S. cerevisiae* 309(M)
structure regulation by RAP1 protein 408
temporal patterning, *C. elegans* 123
tetracycline-responsive (*Tet*) gene, plants 229(M)
tetraploid pseudogene occurence 418(L)
thymidine kinase gene, *Herpes simplex* virus 175
thymidine nucleotide overhang vectors: ligation 225(TT)
thyrotrophs 222
tobacco mosaic virus: plant resistance genes 421(M)
Tourette's syndrome 37
transcription 33(BR), 417(L)
activation 42(M)
regulation by RAP1 protein 408
RNA polymerases 292
silencing in *S. cerevisiae* 78(M)
transcription factor: Pit1 223
transfer RNA: mechanism for selection 27
transformer (*tra*) gene, *Drosophila* 186(M)
transgenic animals
zebrafish: *lacZ* expression 117(M)
zebrafish: vertebrate development model 156
transgenic plants
reduced position effect 187
resistance to virus attack 43(M)
translation
initiation: prokaryotes 402
integrity 71(L)
transposable elements
Drosophila telomere 77(M)
gypsy, *Drosophila* 421(M)
maize 385
phylogeny 7
transposition, group II intron 6(M)
trichome formation, *GLABROUS1* gene, *Arabidopsis* 117(M)
trophoblastic disease, ovarian 118, 346(L), 347(L), 348(L)
trunk segmentation, *Drosophila* 351(M)
tumour infiltrating T lymphocytes 175

tumours and tumorigenesis
Beckwith–Wiedemann syndrome 415
CDK41 gene 228(M)
p53 gene 174, 187(M)
suppression: imprinting role 347(L), 348(L)
vaccine: human cancer treatment 175
two-hybrid system 286
tyrosine kinase
Fyn, mouse 77(M)
signal transduction pathway 145
tyrosine phosphatase 54

U
Ultrabithorax (*Ubx*) gene, *Drosophila* 22
URE2 gene, *S. cerevisiae* 309(M)
urodele amphibian: limb regeneration 169
Ustilago maydis 1

V
variable number of tandem repeat polymorphisms: paternity testing 204
vegetative incompatibility, fungi 2, 441
ventral nerve cord: patterning, *C. elegans* 160
vertebrate axis formation 392
Vg1 protein 371
viral resistance
MHC Class I restricted cytotoxic T lymphocyte role 422(M)
plants 43(M)
viral vectors: gene therapy 176, 213, 254, 302
vulval development, *C. elegans* 44, 145, 315, 390(M)

W
Waardenburg's syndrome type 1 430
Wilms' tumour, loss of *Igf2* imprinting 198, 415
Wilson's disease 39, 246
wingless (*wg*) gene, *Drosophila* 23, 219, 310, 383
WND gene, human 246
Wnt genes 23, 151(M), 219, 301, 310

X
X-chromosome inactivation 230, 415
Xenopus laevis
embryonic patterning 371
LIM proteins 315
mesoderm induction 150(M), 283, 391(M)
pseudogenes 418(L)
translational integrity 71(L)
Xist locus, human 232, 389(L), 415

Y
Y353/B, mouse spermiogenesis 263(M)
yeast *see Saccharomyces cerevisiae and Schizosaccharomyces pombe*
yeast artificial chromosomes
co-cloned: separation technique 40(TT)
ligation problems 345(TT)
preparation using Glucanex 4(TT)

Z
Zea mays see maize
zebrafish
in situ hybridization of embryo 73(TT), 75(TT)
mesoderm induction 283
transgenic, *lacZ* expression 117(M)
vertebrate development model 152
